Jargon Aside! What Does TransBnk Actually Aim To Solve?

1

Separate Bank Accounts & Manual Reconciliation

THE PROBLEM

Businesses log into 5+ banking portals daily, then manually reconcile transactions in spreadsheets — wasting hours and inviting costly errors.

TRANSBNK'S FIX

One dashboard connected to 60+ banks via APIs. All accounts in one view; reconciliation fully automated.

2

Slow, Unreliable Recurring Payments & Escrow Management

THE PROBLEM

EMI collections, loan repayments and escrow setups require mountains of paperwork, manual follow-ups and frequent payment failures.

TRANSBNK'S FIX

API-driven UPI Autopay, NACH and digital escrow — mandates created and retried automatically. ~99.95% collection success rate.

3

Compliance Overhead & Lack of Real-Time Working Capital Visibility

THE PROBLEM

CFOs have no consolidated view of cash across banks. KYC checks, audits and compliance filings are all tracked manually — leading to missed deadlines and regulatory risk.

TRANSBNK'S FIX

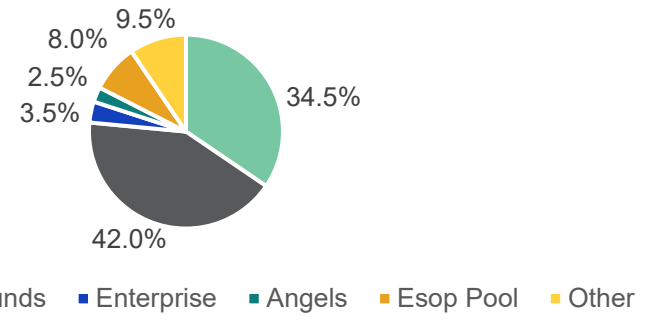
Real-time treasury dashboard across all banks, with built-in compliance workflows and automated audit controls.

Company Overview

What is TransBnk?

- TransBnk aims to **digitize and streamline treasury and banking operations** for enterprises, where processes have historically relied on fragmented systems and manual workflows
- **Unified API layer** that integrates with 60+ banks, enabling corporates to access banking services such as **payments, collections, escrows, mandates and account data** through a single interface
- **Only Indian company with 3 extensive regulatory-compliant & security certifications**
- Platform & services designed to **scale with ecosystem participation**, where bank integrations enhance functionality for corporate clients, and corporate adoption can incentivize further bank integrations

Ownership structure



Product Suite

CI (Corporate Internet) Banking

Unified web/mobile portal across multiple bank accounts

EaaS (Escrow-as-a-Service)

RERA-compliant digital escrow for real estate & lending

NACH / Mandate Mgmt

Recurring payments automation – SIPs, loan EMIs

Treasury / CMS (Cash Management Services)

Real-time cash tracking & liquidity across banks

Commercial Cards

Expense cards & bulk payout infrastructure

ReconHub + APIs

Reconciliation, BBPS, payment gateway, doc verification

Select Product Offerings

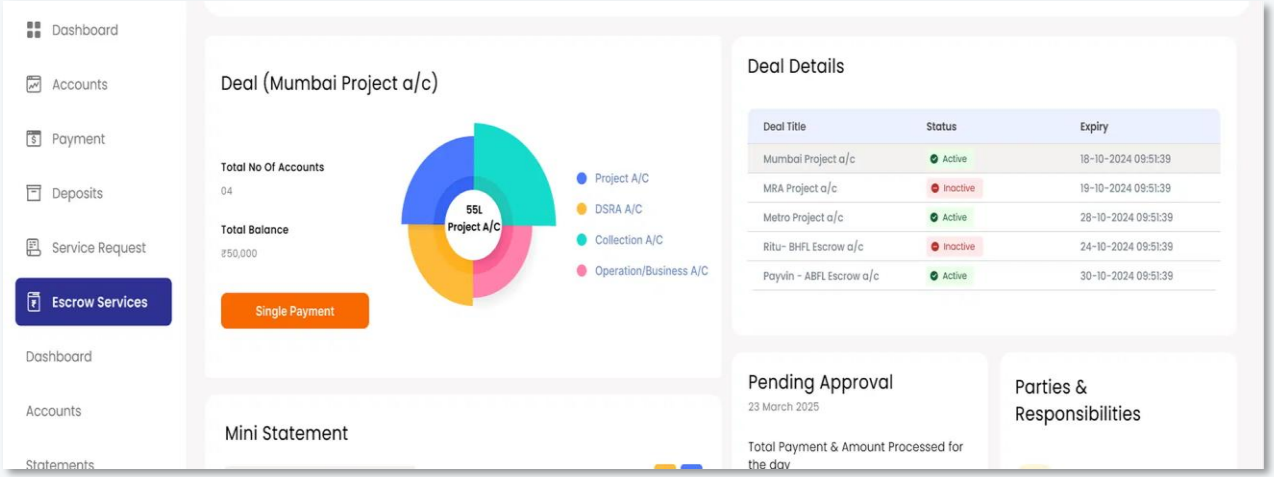
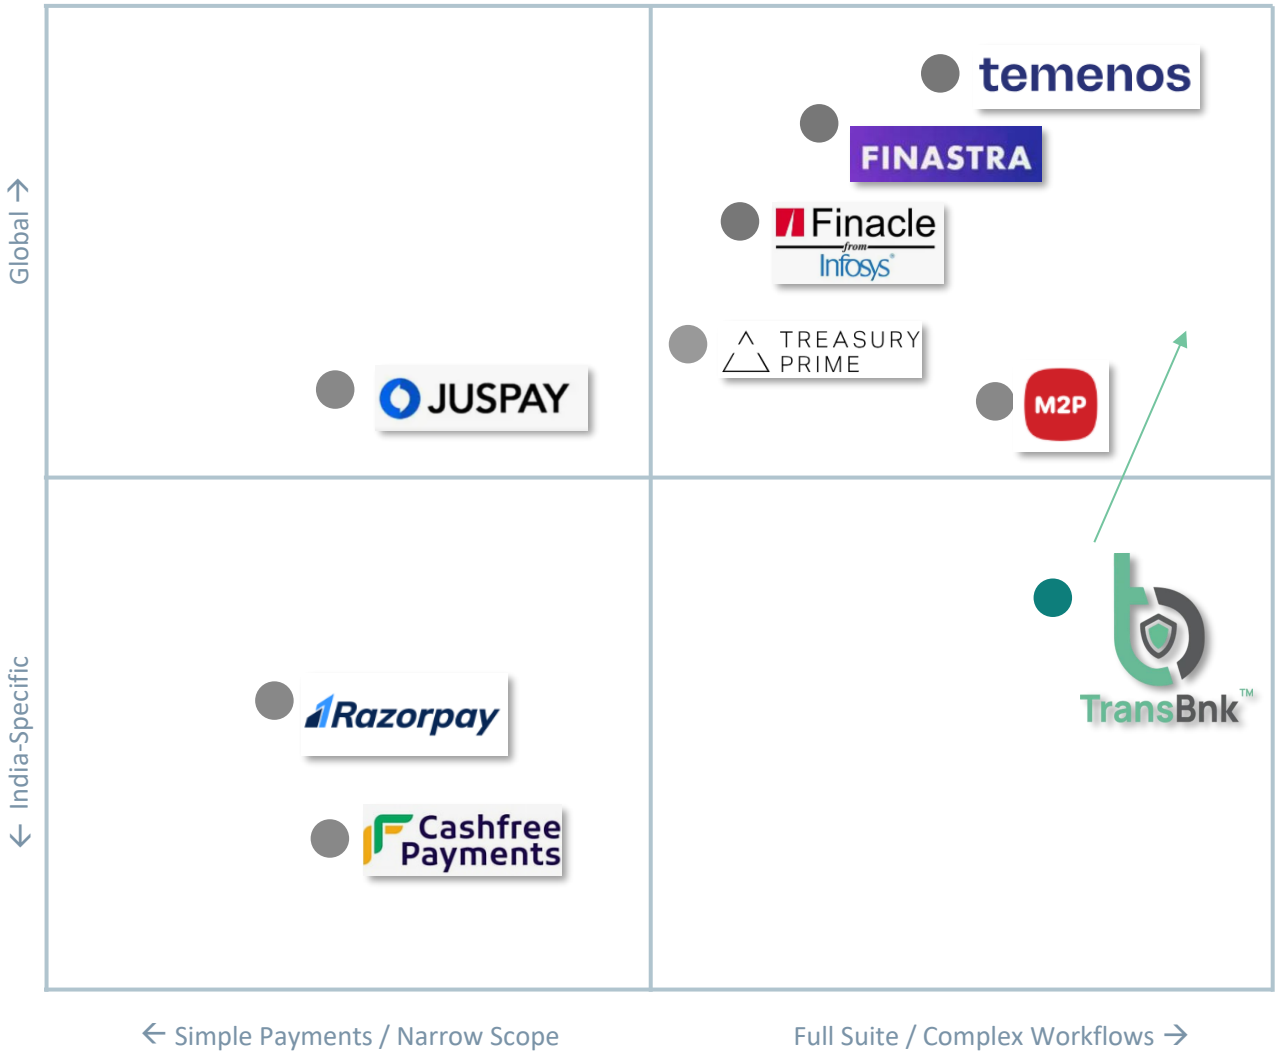
Consolidated Accounts



Escrow A/C Management

Competitive Landscape



Capability	TransBnk	M2P/Falcon /Finastra	Razorpay/ Cashfree/ Juspay
Escrow-as-a-Service	✅ Core	⚠ Partial/ Custom	❌ No
Multi-bank Integration	✅ 60+ banks	⚠ Varies by product	❌ Single-stack
Treasury / CMS	✅ Full	⚠ Enterprise-only/Slow	❌ No
Co-lending NBFC infra	✅ Core	⚠ Partial	❌ No
Modular APIs	✅ 1500+	⚠ Monolithic/ Limited	✅ For payments only

Competitive Landscape – Deeper Dive

PRIMARY RESEARCH

4 stakeholder connection interviews

Core Thesis: Most perceived competitors occupy adjacent layers. M2P / Decentro are the closest — overlapping on co-lending & escrow APIs — but lack TransBnk's full-stack corporate treasury depth.

1 Corporate Banking APIs

M2P Fintech · Decentro

LAYER API infra for NBFCs, fintechs & banks

⚠ **Closest Adjacent Competitor**

KEY INSIGHT

- M2P's co-lending LMS includes escrow automation & mandate management — direct overlap
- Decentro offers digital escrow + payment APIs but lacks multi-bank treasury depth
- M2P's core is card issuance & consumer lending rails — corporate CMS is a newer add-on
- Neither provides a unified treasury + escrow + CMS suite at TransBnk's depth

IMPLICATION

Partial overlap on co-lending & escrow — but TransBnk owns the full corporate treasury workflow

Swara Thorat · Associate M2P Fin.

M2P Product offerings and differentiation

2 Core Banking Platforms

Finastra · Temenos · Finacle

LAYER Bank's internal OS — ledgers, loans, customer A/C

≠ Not a Competitor — TransBnk sits above these

KEY INSIGHT

- Power HDFC, Axis et al. internally — banks are TransBnk's customers, not rivals
- Monolithic, capex-heavy suites; take years to implement
- No corporate client ever chooses between Finastra and TransBnk
- TransBnk consumes their data via APIs — fully complementary

IMPLICATION

Infrastructure TransBnk plugs into — a partner layer, not a competing product

Aparna · Sr. Manager, HDFC Bank

HDFC's Finacle deployment

3 Payment Aggregators & Orchestrators

Razorpay · Cashfree · Juspay

LAYER Merchant checkout — collect, route & settle retail payments

≠ Different buyer, different problem entirely

KEY INSIGHT

- Juspay routes txns across PAs for near-zero checkout failure — E/Q-com focused
- Juspay received RBI PA license — now competes with Razorpay/Cashfree
- PAs serve the merchant's checkout moment; TransBnk serves the CFO's treasury
- Zero capability in escrow, mandate-heavy NBFC flows or RERA compliance

IMPLICATION

Merchant-facing payment rails — different buyer, different workflow, no overlap

Natrajan Kanan · Lead Architect, Juspay

Payment orchestration

4 UPI Apps & Neobanks

GPay · PhonePe · FamPay

LAYER Consumer P2P/P2M payments on NPCI's UPI rails

≠ Built for retail scale — wrong stack for corporates

KEY INSIGHT

- UPI rails optimised for consumer scale — P2P, P2M, checkout
- Corporate use cases (mandate-heavy NBFC, RERA) need a purpose-built regulated stack
- PhonePe/FamPay/Gpay are mere consumer-tech; neither is infra-for-Corporatess

IMPLICATION

NPCI rails can help build small-ticket high-volume — not a product competing for the same enterprise buyer

Karan Khera · ex-Product, FamPay

UPI rails & corporate nuances

Market Sizing

$20B

TAM: India B2B Fintech by 2030

Chiratae/Digital FIfth Forecast

$4-5B

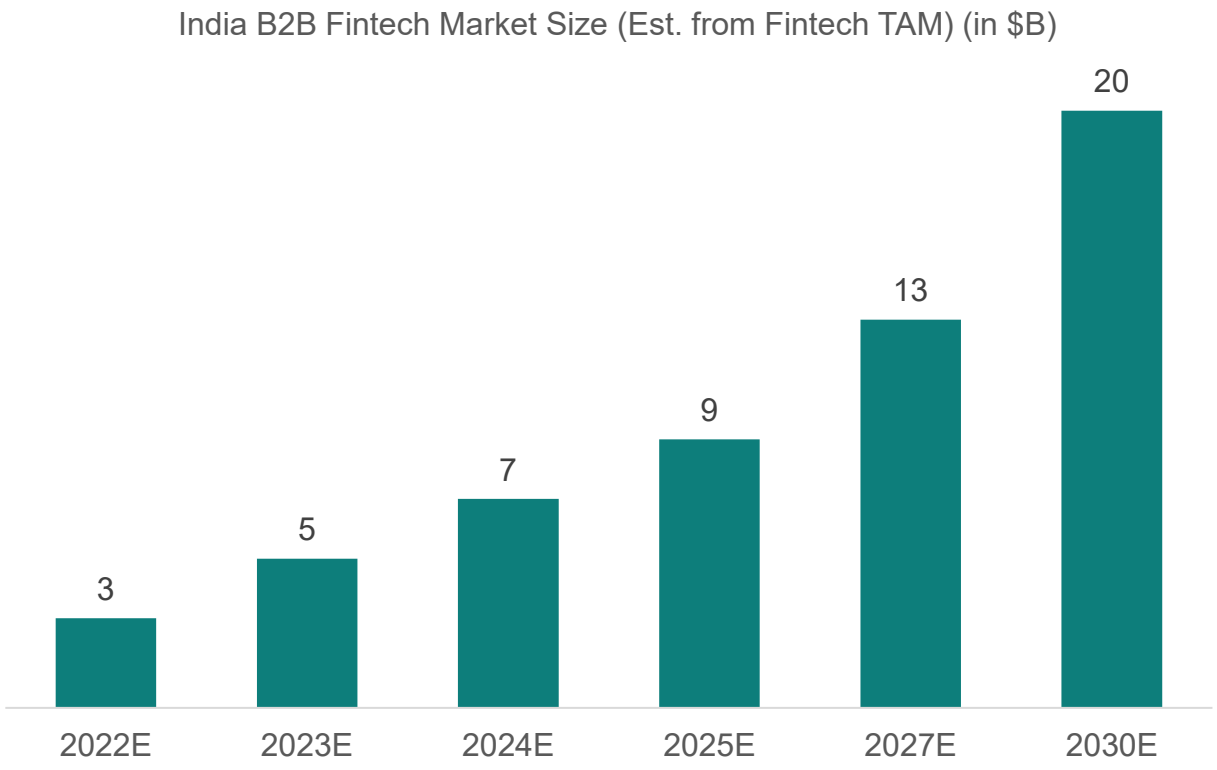
Relevant SAM (est. as 25% as solves 2 of 6 cases of B2B fintech)

World's largest MSME base Addressable

$500M-$1.5B

SOM (est. as 10%-30% of SAM based on current growth)

Obtainable by 2030



Structural Tailwinds

RERA Mandate

70% of real estate buyer payments must be held in escrow — direct demand driver for TransBnk

Digital-first NBFCs

Rise of co-lending models creates demand for multi-party transaction infra

Legacy Displacement

Banks still rely on paper workflows; corporate portals fragmented across institutions

RBI API Push

NACH, Payment Aggregator rules & Account Aggregator ecosystem favor compliant platforms

Business Model

IaaS

TxB Hub *Infrastructure Layer*

Banks white-label TxB Hub to run Escrow, NACH and CIB on their own stack. TransBnk earns via platform license + per-transaction fees.

Revenue: License fees + Transaction fees (Banks)

powers

SaaS / PaaS

TrustHub *Product Layer (built on TxB Hub)*

Corporates and fintechs subscribe to TrustHub SaaS (Treasury, Payouts, BBPS) without touching TxB Hub. Rapid onboarding, no core banking required.

Revenue: SaaS subscriptions + API usage fees (Lenders, Fintechs, Corporates)

Who Buys What?

Banks *TxB Hub (IaaS)*

NBFCs / Lenders *Both hubs (infra + products)*

Corporates *TrustHub (SaaS)*

Fintechs *TrustHub APIs (PaaS)*

Why the Model Works?

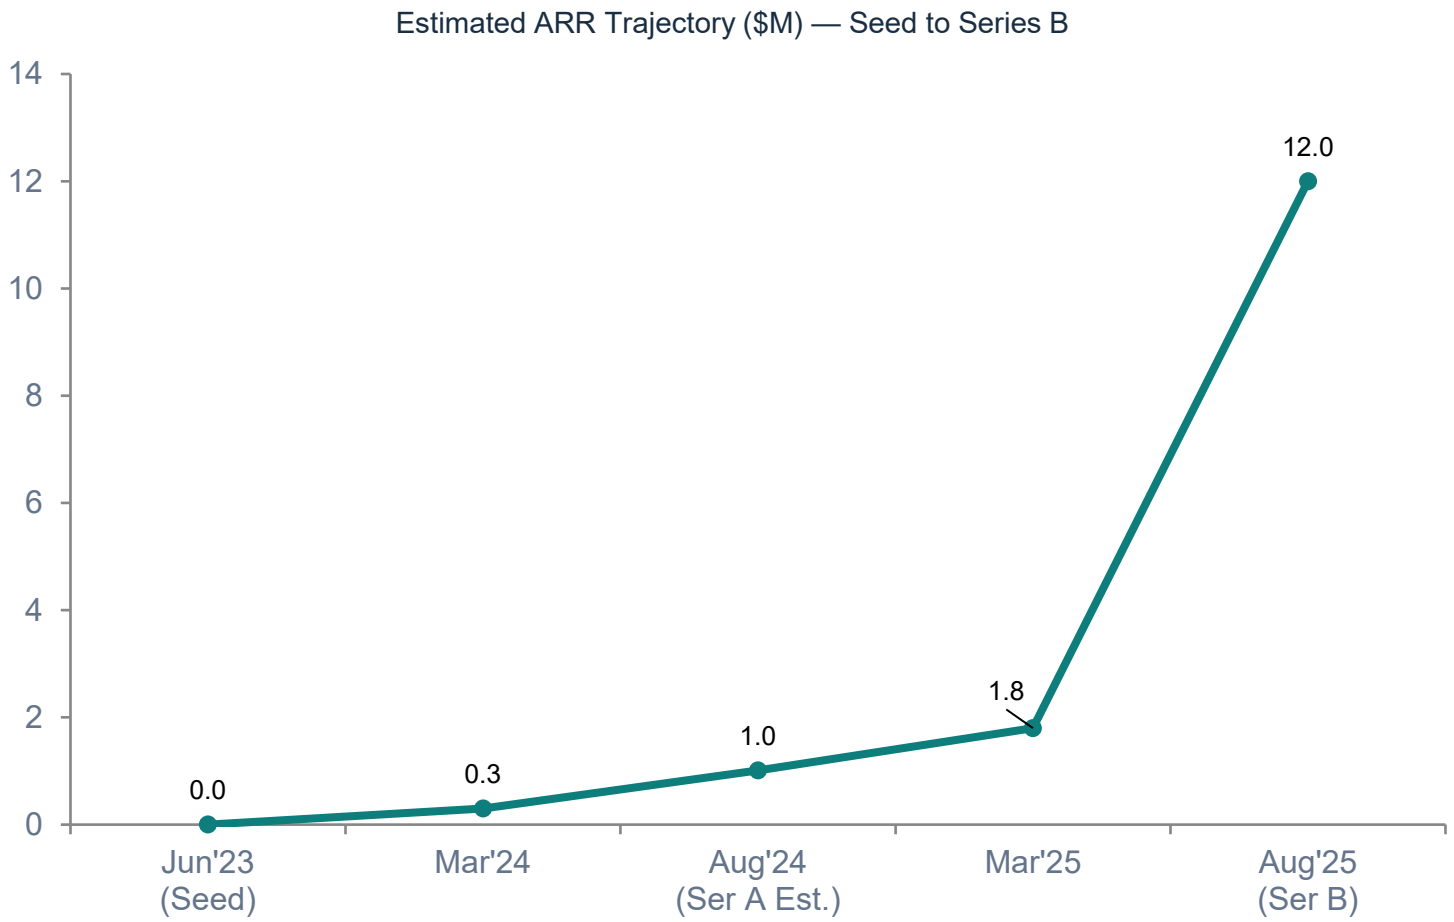
High Switching Cost for Clients
Once integrated, migration is operationally expensive — creating sticky recurring revenue

Low Marginal Cost for TransBnk
Fixed infra investments; each new client adds revenue with near-zero incremental cost

Volume Compounds
Transaction fees grow automatically as clients' businesses scale — no additional sales effort

Compliance Premium
Regulated entities pay a premium for a certified, audit-ready platform vs. building in-house

Financial Metrics



Note: Based on 12x revenue growth reported by TechCrunch (Aug 2025) and FY24 financials (₹2.68Cr revenue as per TheKredible/Tracxn). ARR milestones are reconstructed estimates

Peak: 2,000 txn/sec capacity

Differentiation & RIGHT-TO-WIN

01 Bank Integration Network

60+ banks (private, public, MNC, SFBs) are fully integrated into the platform. Each integration required months of technical and compliance work — creating a nearly irreplicable technical moat

02 Regulatory Certification Stack

ISO 27001, PCI-DSS, SOC2 Type II. Banks and NBFCs are required by their own regulators to use only certified vendors — this is a mandatory filter that eliminates most competitors

03 Founder Domain Network

70 collective years of corporate banking experience (HDFC, Axis, etc.) — translates into enterprise relationships, compliance expertise, and understanding of arcane workflows that no tech team can shortcut

04 First-Mover in Whitespace

India has virtually no direct competitors in multi-bank corporate transaction banking SaaS. The window to establish integrations, certifications, and client relationships is open — but narrowing

Key Risks & Mitigants

Regulatory / Compliance Risk

Medium

⚠ RBI or SEBI policy changes could tighten API access, alter escrow requirements, or increase compliance burden for third-party platforms.

✅ Compliance-first architecture means TransBnk can adapt faster than competitors. Regulatory trends (RERA, NACH) have consistently favored its products.

Early-Stage Revenue Concentration

Medium

⚠ FY24 reported revenue of $300K — company was early stage. Next revenue figure was $12M ARR. Heavy revenue growth dependence on continued enterprise client acquisition.

✅ 12x growth by mid-2025 shows rapid scaling. 220+ clients reduces single-client concentration risk.

Scaling Beyond India

High

⚠ SEA and MENA expansion requires adapting to new regulatory frameworks, banking infrastructure norms, and language/currency differences.

✅ Modular API-first architecture makes market adaptation faster. Series B specifically allocated for geographic expansion resources.

Incumbent Bank / Tech Response

Medium

⚠ Global players (Finastra, Temenos) or large banks could build competing solutions or acquire a rival.

✅ TransBnk's India-native approach, speed of integration, and relationship network give a 3-5 year head start. Indians banks are unlikely to build in-house at the required scale.

Leadership & Investor Base

Vaibhav Tambe
CEO & Co-Founder

- Corporate banking leadership at leading Indian private banks.
- Envisioned TransBnk from a core corporate pain point

Lavin Kotian
CTO & Co-Founder

- Deep technology background in financial systems.
- Architect of TransBnk's 1,500+ API platform and bank integration stack

Pulak Jain
CBO & Co-Founder

- Business development and institutional relationships.
- Instrumental in onboarding banks and 220+ enterprise clients

Sachin Gupta
CPO & Co-Founder

- Product leader shaping TransBnk's modular SaaS suite.
- Ensured compliance-first product architecture across all modules

Recent News: Jan 2025 - Govind Dichwalkar joins as COO to drive global expansion and operational scaling!
